

## What is Dry Ice?

To put it basically, dry ice is the solid form of carbon dioxide. The main purpose of dry ice is for cooling, as it is colder than ice water. Dry ice is a very effective coolant compared to ice water, since it is colder and leaves no moisture as it changes state.

## What Can Dry Ice Be Used For

Cleaning and cooling are the two primary uses of this ice. And they do both jobs exceptionally well! But it also has a few other uses, such as being used for firefighting efforts and solidifying oil. Whether it is for commercial use, industrial use, or scientific use. We are good to go.

# OUR *Dry* ICE SERVICES:

## Wine Farming

Cryo-maceration and transport stages of wine making the wine-making processes.

## Engineering

Shrink fitting of bearings, Pipe-Freezing and valve repairs.

## Emergencies

Food, drink and organ transport, long lasting, colder freeze.

## Special Effects

Dance floor clouds and water bubbles.

## Blasting

Remove rust, paint and debris from sensitive areas.

## Fishing

Keep bait or fish cold for days.

## Hunting

Keep meat cold for many days during long hunting trips.

## Farming

Freeze-branding cattle considered safer and less painful.

## Leisure

Perfect for long camping or hiking trips.

## Why choose us?

- We are the sole supplier of Dry ice related services and products in Namibia.
- Our knowledge of our product surpasses all in our field of expertise.
- We are readily available for deliveries and services 24/7.

**Deliveries  
Nationwide**
